CIDEON Configuration Discovery

Workshop for Success

CIDEON Configuration Discovery represents a professional basis for introducing you to integrated configuration processes with a high level of engineering content as well as CAD documentation.

It uses our proven and standardized consulting methodology that meets all your process requirements along the entire product configuration value chain.

We work with you to develop a specific end-to-end solution that can be implemented in your day-to-day tasks. One focus is on evaluating potential for time and cost savings based on the way you currently work and the way you want to work in the future.

CIDEON solutions enable integrated configuration processes. Discover new opportunities for the faster processing of orders and for better planning.

Your Benefits:

- Detailed implementation plan with transparent benefit analyses
- Optimal collaboration and structured approach involving your own specialists
- Professional analysis of your current configuration processes
- Optimal preparation for realizing your projects
- Time savings from in-depth implementation expertise
- Improved quality of implementation projects

Professional Analysis

CIDEON Configuration Discovery provides the ideal basis for achieving integrated configuration processes.

The CIDEON Configuration Discovery Process

■ Creating understanding

Together with your users, we look at how configurable products are processed in your business. The aim is to jointly develop an understanding of the issues you face and to develop potential benefits with a new solution.

■ Envisioning ideal states

Establishing target states that have measurable criterion and are based on benefit analyses from as-is states. An illustrative Cideon demo example assists you in this process.

■ Developing solutions

The target concept is developed into a practical solution. The necessary system architecture together with an estimation of internal/external costs is also included as well as an implementation and project plan.

■ Looking ahead

We present the workshop results outlining proposed solutions and specific recommendations for making the next steps.

CIDEON Conify

is our standardized and universally applicable software solution to meet the specific requirements for all your configuration processes.

CIDEON Conify enables consistent connectivity of data from sales and engineering phases to automatically provide PDM-compliant CAD data for configured products. Customized products can then be created quickly while also conforming to standards. **Get in contact with us!**
